PROJECT REPORT

BY PRATIK KUMAR MOHANTY

TASK 1 - Awareness Infographic

For this task, I created a one-page infographic on Digital Literacy using Canva. The design focuses on helping students understand the meaning and importance of digital literacy in a simple and visually engaging way. My poster includes key sections such as “What is Digital Literacy,” “Safe Internet Practices,” and “Professional Online Presence.” Each section contains short, clear points along with relevant icons to make the content easy to understand and remember. The infographic explains that digital literacy involves the ability to find, evaluate, create, and communicate information using digital tools. It also highlights the importance of online safety, such as using strong passwords and recognizing phishing attempts, along with maintaining a professional digital identity through proper email etiquette and clean online profiles.

One interesting aspect of this task was balancing design and content. It was sometimes challenging to fit all important information into a single page without making it look crowded. However, using Canva’s layout and design features helped me organize the content effectively and create an attractive final output.

TASK 2 - Digital Portfolio

For this task, I created and updated my profiles on GitHub, LinkedIn, and Kaggle to build a strong professional digital presence. GitHub is mainly used to showcase coding projects, collaborate with other developers, and maintain a portfolio of technical work. I created a profile README including my name, branch, academic year, and my learning goals. LinkedIn is a professional networking platform where I added my education details, including my degree, institution, and expected graduation year, to connect with peers and professionals. Kaggle is a platform for data science and machine learning where users can practice datasets, participate in competitions, and improve analytical skills.

Over the next four years, I plan to actively use GitHub to upload my projects and track my progress in programming. On LinkedIn, I aim to build a strong network, share achievements, and explore internship opportunities. Through Kaggle, I will enhance my data analysis and problem-solving skills by participating in competitions and learning from the community. Overall, these platforms will help me grow academically and professionally.

TASK 3 - Collaboration Platforms

Forthistask, I used HackerRankfor codingpracticeandGoogleWorkspace toolsfor collaboration. OnHackerRank, I created an account and completed a beginner-level python problem, which helped me understand basic problem-solving and coding logic. This platform is useful for improving programming skills, practising algorithms, and preparing for technical interviews.

For the collaboration part, I created a Google Form titled “Digital Literacy Awareness Quiz” with five questions, including multiple-choice and short-answer types. The form was designed to test basic knowledge of digital literacy among my classmates. I also linked the responses to a Google Sheet, which helps in organizing and analyzing the collected data efficiently.

These tools will be very helpful for my academic journey. HackerRank will allow me to regularly practise coding and strengthen my technical foundation over time. Google Forms and Sheets will help me in conducting surveys, collecting feedback, and managing data for projects and assignments. Overall, these platforms enhance both my technical and collaborative skills, which are essential for academic and professional growth.

TASK 4 - Email & Etiquette Guide

Poor diaital communication can often lead to misunderstandings and problems. For example, a student once sent a short and unclear and politenes, whity made the polesor percee as unprofestonal and careless. As a result, the request was denied, and the student faced penalties.

This situation could have been handled better by writing a clear and respectful email, explaining the reason for the delay, and formally requesting an extension. Proper structure, polite language, and clarity are essential in digital communication. By following basic email etiquette, the student could have maintained protessionalism and possibly received a positive response.

TASK 5 - Prevention Guide

While researching cybercrime, I was most surprised by how easily people can become victims of phishing and online payment fraud without realizing it. Many attacks look extremely genuine, such as fake bank messages or UPI requests that appear identical to official apps. I found it alarming that even a small mistake, like clicking on an unknown link or approving a payment request, can lead to significant financial loss within seconds. It made me realize that cybercriminals mainly rely on human error rather than technical hacking.

As a result of this learning, one habit I will personally change is being more cautious while handling online transactions and links. I will always verify the source before clicking on any link and will avoid sharing sensitive information like OTPs or passwords under any circumstances. Additionally, I will double-check UPI requests before approving them to ensure safety.

thank you
